

BlackWire plus+

The **BlackWire plus+** is a mains cable with semi-balanced geometry, shielded, with an area of 2.5mm² for each conductor. Despite the 11mm external diameter, it keeps excellent flexibility in all conditions.

At a particularly affordable price, the **BlackWire plus+** represents an excellent alternative to more expensive cables without any limitation in terms of power constraint or interference protection. **BlackWire plus+** use is particularly advised together with filters and power distributors of the **BlackNoise** line, especially on the output of the devices themselves.

Three the strength points:

1. **the shielding** that avoids that the cable behaves like an antenna, either receiving or radiating electromagnetic energy. The shielding, moreover, allows the cleanliness performed by the **BlackNoise** filters to reach unimpaired the audio electronic inlets.
2. **the excellent Wattgate plugs on both ends** to guarantee the best possible mechanical and electrical coupling.
3. **an excellent neutrality without any specific tone characterization**.

Cabling follows the IEC standard for neutral and phase, this one also marked on the mains plug.

Both cables can be built on request with a variety of terminations (see images) and with lengths different from the 1,5mt standard.

GoldWire

The bass range performance is first-rate, powerful and well controlled.

Francesco Bollorino, VideoHIFI.com - number 18

Extremely sturdy sound, delicate in the middle range, soft in the highs and with a powerful "sumo wrestler" low end...
 ...another parameter particularly well represented is the soundstage, well over and beyond the speaker on both the horizontal and vertical planes with a solid and well structured scene...
 ...the particularly good value for money in relation to the built and the material used makes it a very desirable product.

Bruno Fazzini, Le guide di FDS

The **GoldWire** is a semi-balanced, shielded mains cable with a twisted multi-conductors geometry, that sums-up for phase and neutral to an area of 4.5mm² each.

Notwithstanding the greater external diameter (13mm) in respect to the **BlackWire plus+**, it's still able to keep a very good flexibility despite dimensions.

Together with the **BlackWire plus+** there is the shielding employed over the entire cable length, the choice of excellent **Wattgate** plugs and the phase identification marked on the mains plug.

The **GoldWire** can be advantageously employed for any kind of audio gear with a strong liking for big integrated/power amps (monoblocks, stereo or multichannel), powered sub-woofers or in the professional audio field where the enormous power capability finds its natural place.

The **GoldWire** is a markedly better performer than the **BlackWire plus+** leading ahead the same general philosophy (great supply current, tone balance and immunity to radiated/received noise) while insuring a general improvement in all parameters, still at a reasonable cost.
